A problem-solver, however you use it

When you scale up a bucket to hold 20 litres of food and beverage ingredients, the bucket becomes more than just a bucket. With its hygienic design and premium-quality, durable materials, the Vikan 20 Litre Bucket is a multi-purpose powerhouse you'll find yourself using everywhere.

The quality and durability you expect

Like all Vikan products, the 20 Litre Bucket is made from premium-quality, highly durable materials that are all approved for use in the food and beverages industry. That means:

- Long-lasting performance
- No need to replace frequently – save money
- Higher quality for greater compliance certainty
- Less wear and tear
- Less risk of foreign bodies (plastic fragments)

Mix with speed and ease

The 20 Litre Bucket is an ideal “mixing station”, where you can mix ingredients stored in smaller Vikan buckets or in multiple 20 Litre Buckets.

The bucket is perfect for solid or liquid ingredients, and its optimised size and shape make it large enough to meet all your mixing needs, but small enough for safe lifting and transport. Features like the bottom handle and a rounded rim and lip also facilitate ergonomic, no-spill lifting and pouring. And durable bevelled measurements inside help you measure more accurately.

Developed on the principles of hygienic design, the 20 Litre Bucket is easy to clean and helps you comply with hygiene and food safety regulations however you use it.

Store
like never before

A 20-litre capacity makes the 20 Litre Bucket a very useful storage solution for liquid or solid ingredients and mixtures. Add in a stackable design and portability, and you get storage that can save space and time.

As space is a challenge in most production facilities, we made the 20 Litre Bucket stackable. Stack two buckets on top of each other, and effectively double the amount of ingredients you can store per square metre of storage space.

Handles and an optimised size make the 20 Litre Bucket a conveniently portable storage solution, while a snap-on lid and hygienic design features facilitate compliance with food safety standards.

Food safety and hygienic design

In the food and beverages industry, companies that don't meet food safety and quality standards soon find themselves out of business.

That's why we developed the 20 Litre Bucket in line with hygienic design principles – with features such as drainage holes to prevent liquid accumulation and easy-to-clean rounded angles inside. And it's why our products comply with all relevant EU and FDA standards for food contact.

What is hygienic design?

- Easy to clean and dry
- Durable and well made
- Smooth surface finish
- No acute internal angles
- Food-safe materials
- Fully tested and documented

Move more, more easily

The 20 Litre Bucket is made to move, either by yourself or with a colleague using the ergonomically designed side handles. When carrying lighter loads, use the comfortable over-moulded grip on the steel handle. When moving heavier loads, team up with a colleague and use the sturdy side handles.

The bucket's large size lets you move more in fewer trips, saving time, and its ergonomic design makes pouring and cleaning easier, with less risk of spills or strain. The bucket is available in 5 colours to facilitate HACCP compliance with regard to segregation of use.

Clean safely and effectively

In addition to mixing, storing and transporting food and beverage ingredients, the 20 Litre Bucket makes an ideal cleaning and disinfection station for all sorts of food-related tools and utensils.

It's the perfect size for cleaning most items, and its wide top facilitates access and manoeuvring while cleaning. The large size also provides plenty of room for disinfecting your tools after cleaning. And it's easy to move around as needed.

Our family of hygienic design buckets

6 Litre Bucket - 56883
Lid for 6 Litre - 56893
