- #5631 PROTEC™ GREENLIGHT™
- #5632 PROTEC™ REDLIGHT™
- #5929 PROTEC™ PRO-220 Light

PROTEC™ Dual Mode Pressure Switch is the accessory to have, especially if you already have NEBO® or PROTEC™ flashlight. At it's coiled resting position, the switch is just over 17", but can extend to over 3' to suit your specific needs. The most important feature is the dual mode. The steady switch uses hard/soft touch technology allowing settings to be changed in two different ways.

Hard touch: **Simply click through the functions (light will turn off in between settings.) NOTE: Some lights will reset to first setting (100% ON) after being off for 10 seconds.**

Soft touch: **Press button halfway with no click. This allows the user to cycle through the settings quickly without the light turning off between settings.**

The momentary switch activates the light only while pressure is being applied to the button. (Light will change settings with each use. *NOTE: Some lights will reset to first setting (100% ON) after being off for 10 seconds.)
