Metal Detectable End Cover

Baldor•Dodge Metal Detectable End Cover

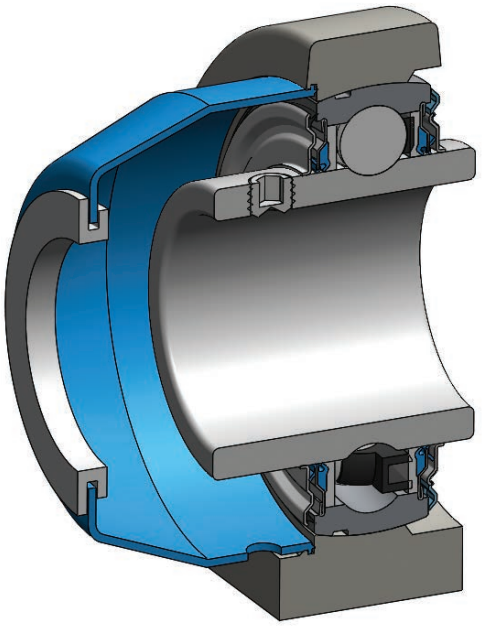

Food and worker safety are big challenges facing food processing facilities today. Traditional plastic end covers that ensure worker protection from moving parts are not practical under the strict guidelines of the food and beverage industry.

Baldor believes in “taking care of our customers safely” as part of our culture. This includes finding a solution to keep workers safe in food and beverage facilities without compromising food quality.

Baldor•Dodge patent pending Metal Detectable End Covers are designed to provide a safe solution for food processing facilities. Food safety end covers are constructed of a durable, high-density polyethylene (HDPE) material containing stainless steel particles. This material allows the end covers to be detected by x-ray equipment and metal detectors used in the food and beverage industry, ensuring that if it falls into the food, it will be found.

Patent Pending

Features:

- Made from a detectable patent pending polyethylene material containing stainless steel.
- Easily visible blue color to provide quick inspection.
- Snap on style providing easy installation and rigid performance in washdown applications and fit all Baldor•Dodge E-Z Kleen and Ultra Kleen mounted ball bearings.

Baldor•Dodge Metal Detectable End Covers:

- Include a drain hole to prevent moisture from collecting inside the cover.
- Incorporate an additional lip on the mounting surface for a more rigid fit within the housing that creates a better seal and reduces the chances that the cover will get knocked off during operation or high pressure cleaning.
- Provide positive sealing in wet environments.
- Create a safer working condition by covering exposed, rotating shafts.
