DORMER

THREADING MADE EASY

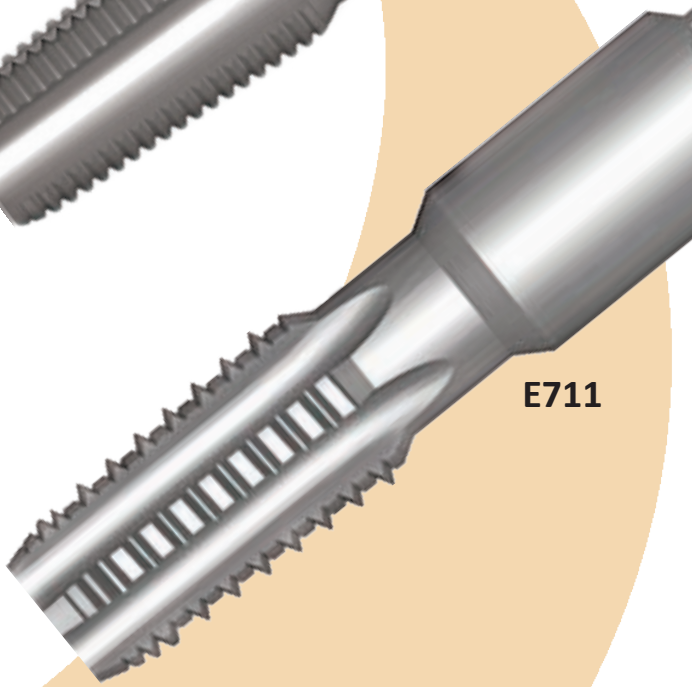

NPT Straight Flute Pipe Taps

These Dormer brand general purpose HSS pipe taps are designed for threading a wide variety of materials under average conditions. Generally used for pipe fittings, the NPT (National Pipe Taper) threads produced will require the use of a sealant such as teflon tape or pipe compound to ensure a tight “leak-free” joint.

E710

The E710 style general purpose, medium hook for multi-material tapping**.** Generally used for pipe fittings and couplings in most ferrous and non-ferrous materials. The nominal size of the pipe tap is that of the pipe fitting to be tapped and not the actual size of the tap. Sizes range from 1/16”-27 to 2”-11.5.

E711

The E711 style interrupted thread is designed for chip evacuation. Removal of every other thread allows more coolant deeper into the hole which helps eliminate torn threads and re-cutting of chips. Ideal for use in soft, ductile materials or those producing long, continuous chips. Sizes range from 1/8-27 to 1.1/2-11.5.
